

linPublic — GUI Layout Review

Bottom-nav tabs, current layouts, and navigation transitions

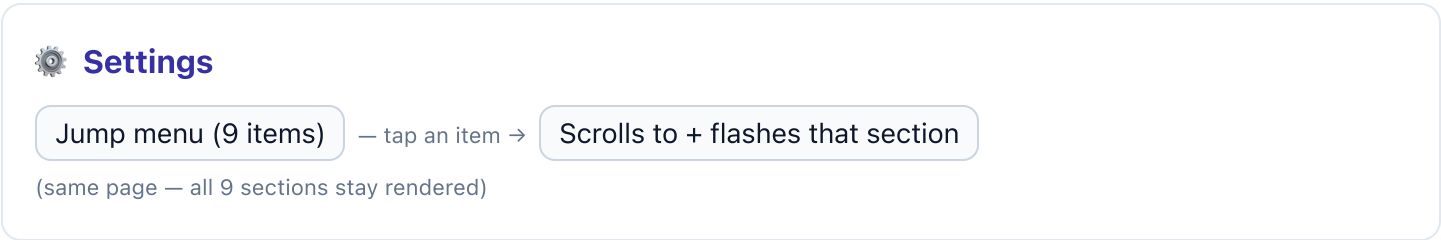

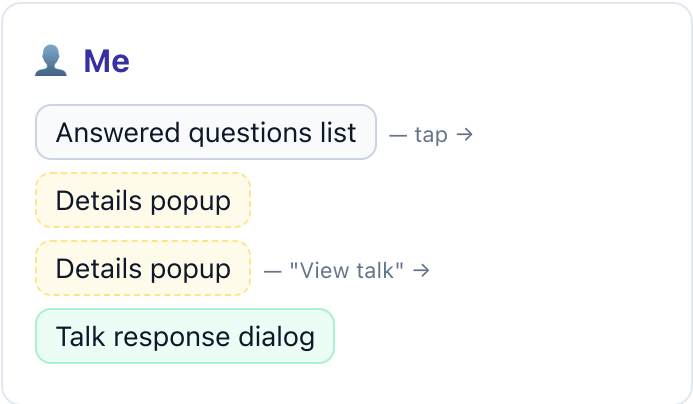

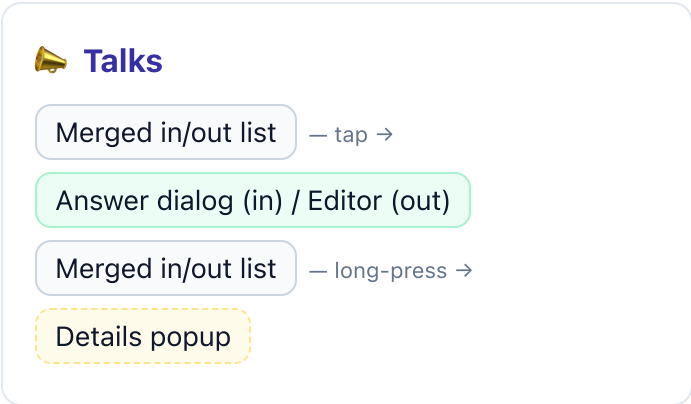

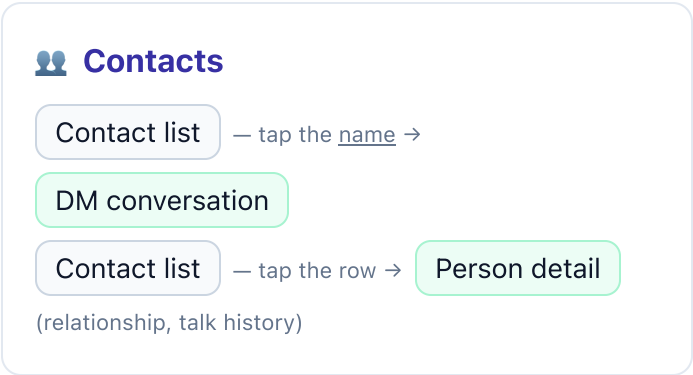

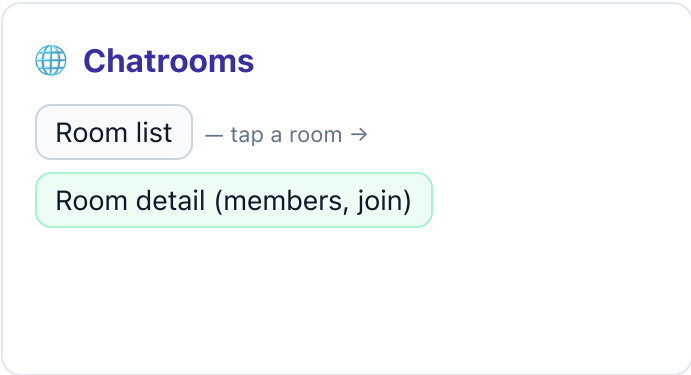

Generated 2026-08-03

Navigation overview

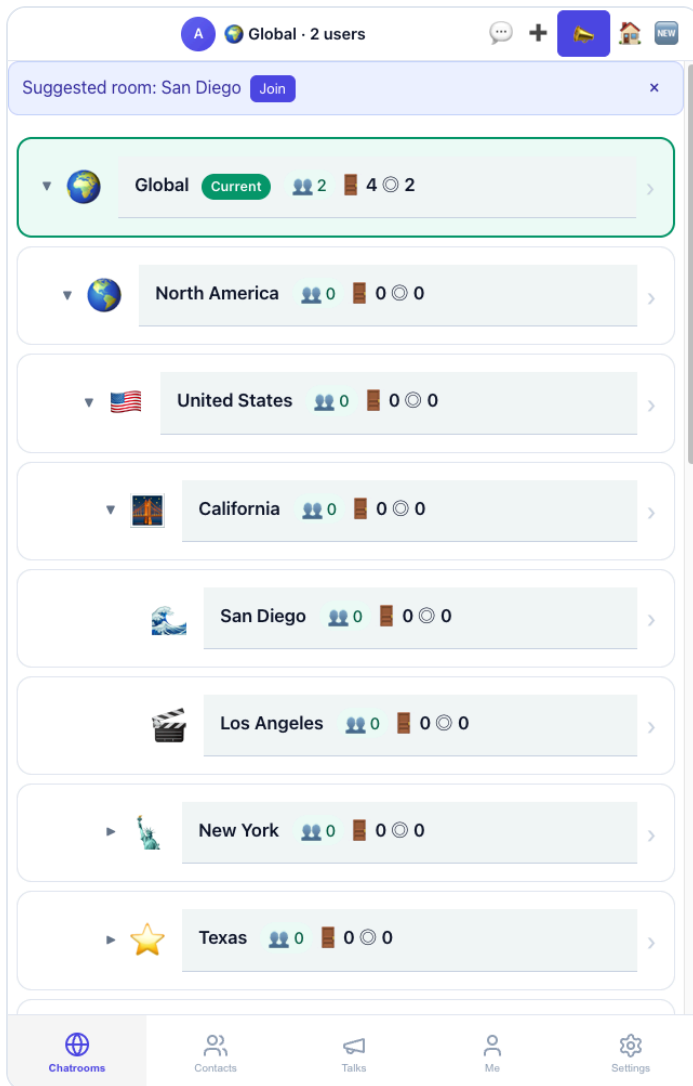

All five tabs are reachable at any time via the bottom navigation bar. Within each tab, the diagrams below show the one layer of navigation reviewed this session.

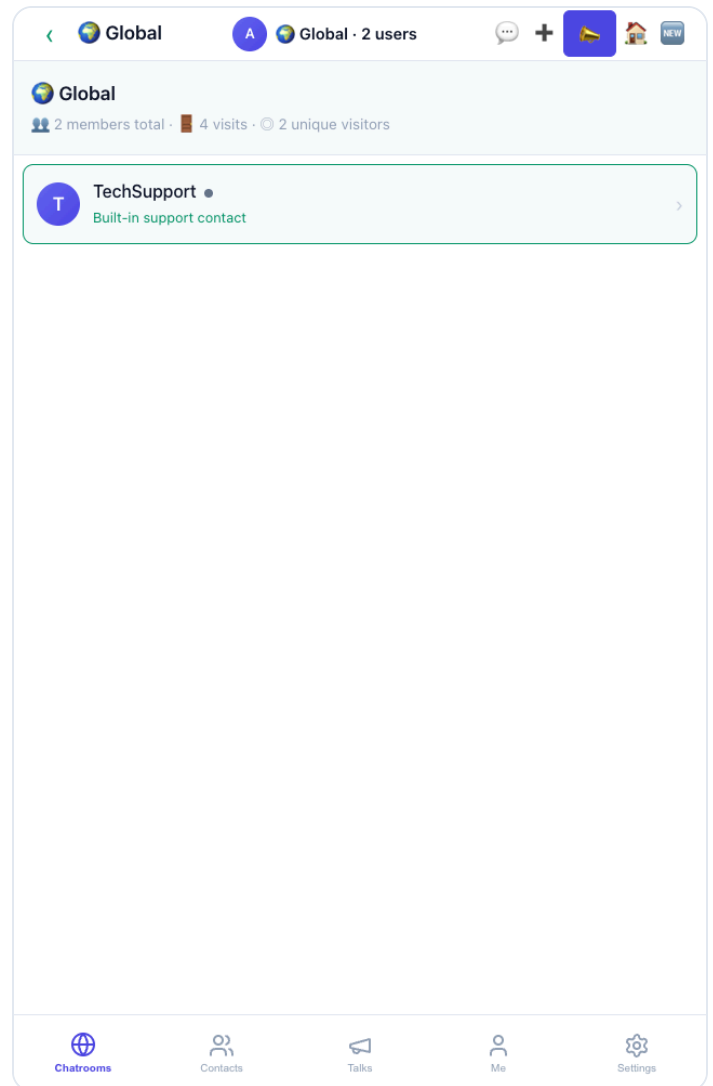

▲ always switchable via the bottom navigation bar ▲

Chatrooms

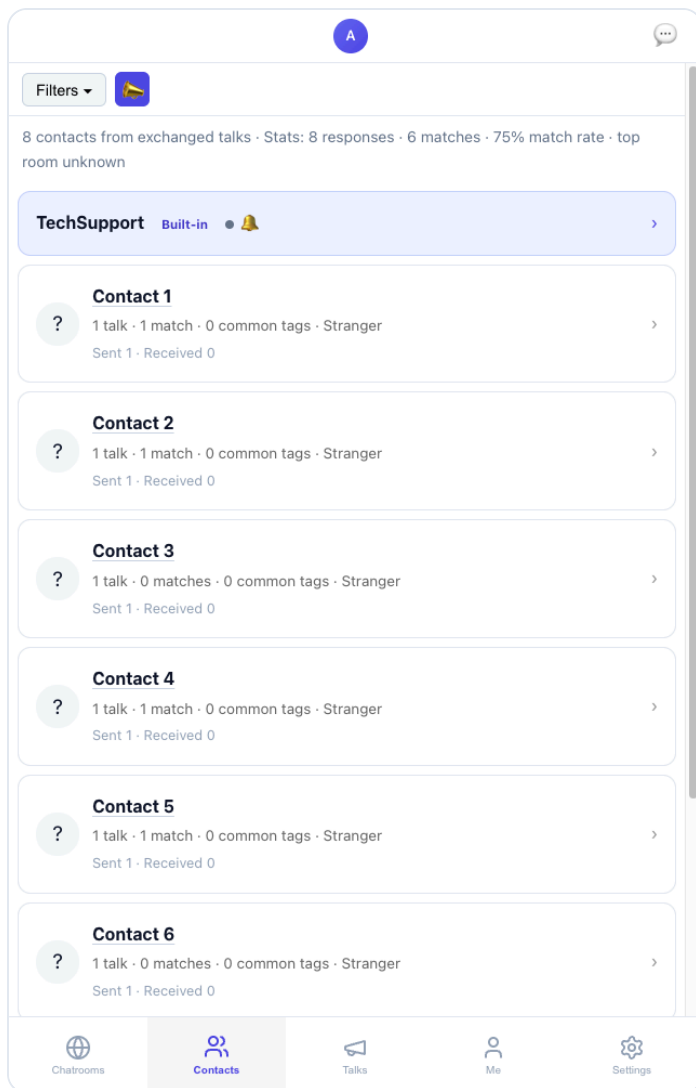

Room list — default view on login.

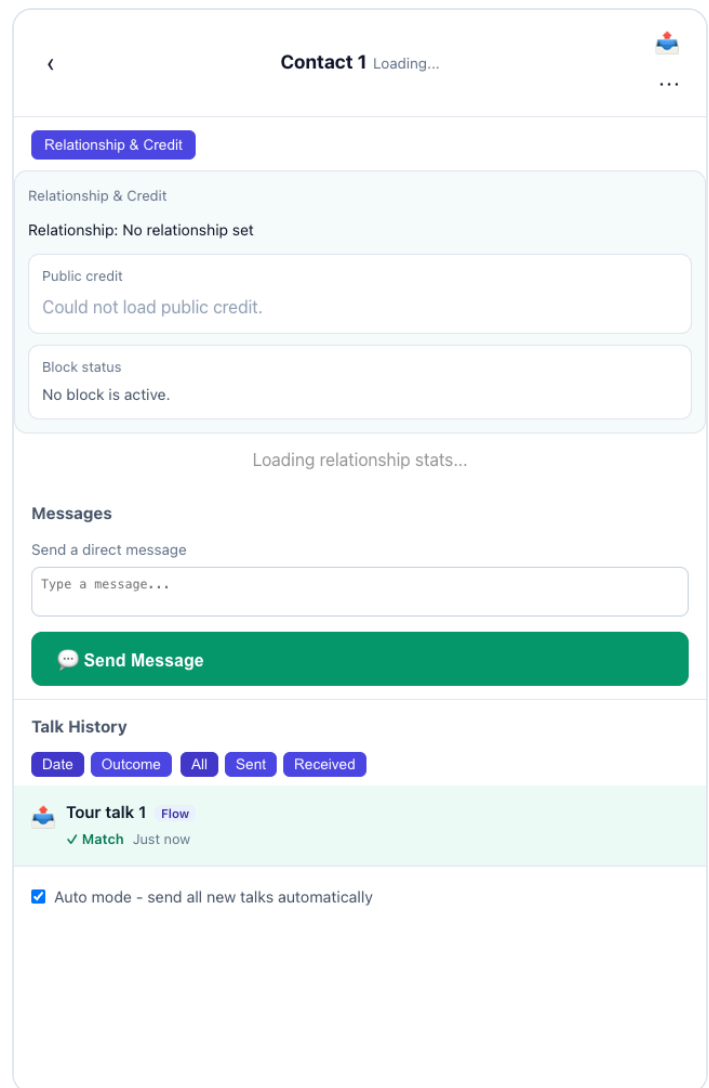

Room detail — after tapping "Global."

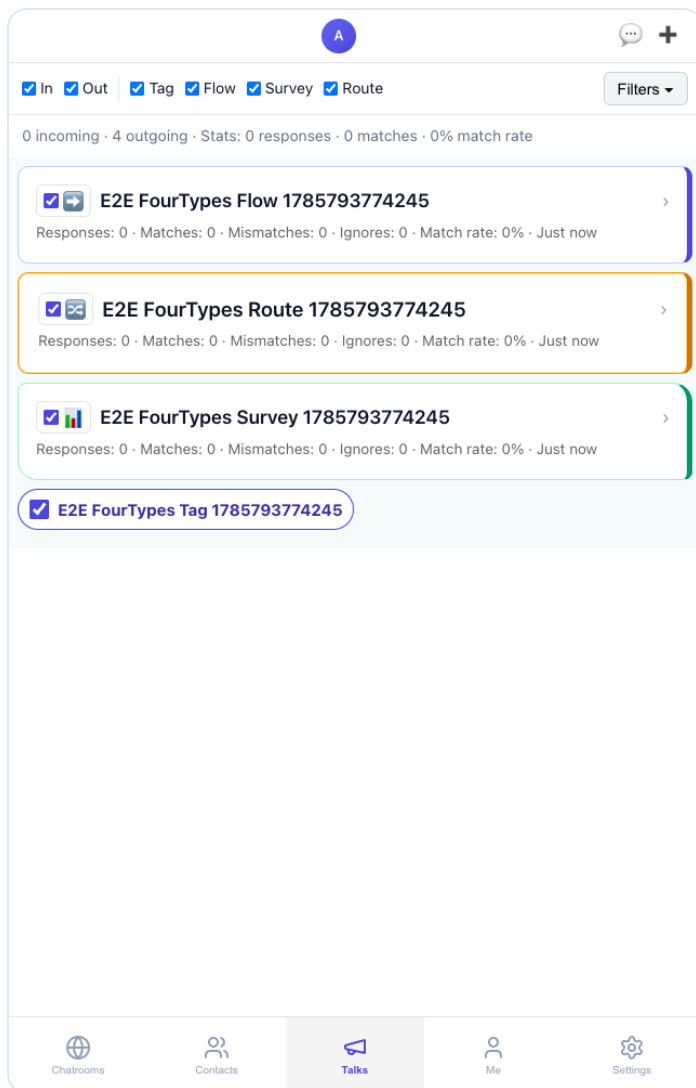

Contacts

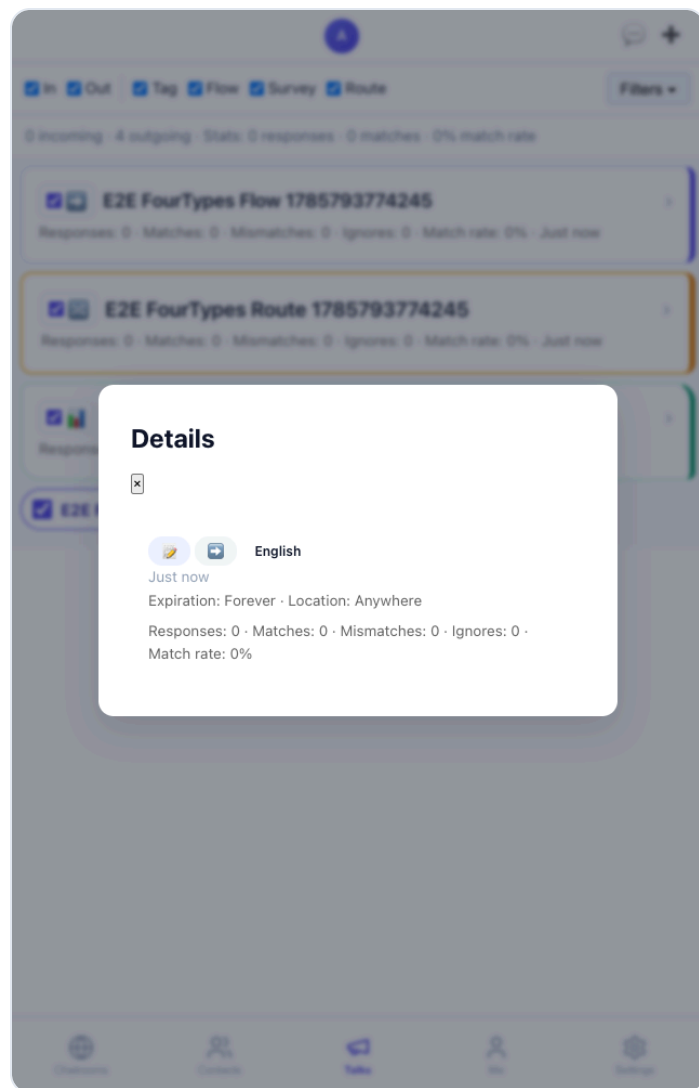

Contact list — merged header/stats line, icon broadcast button, single relationship mention per row, underlined name as its own tap target.

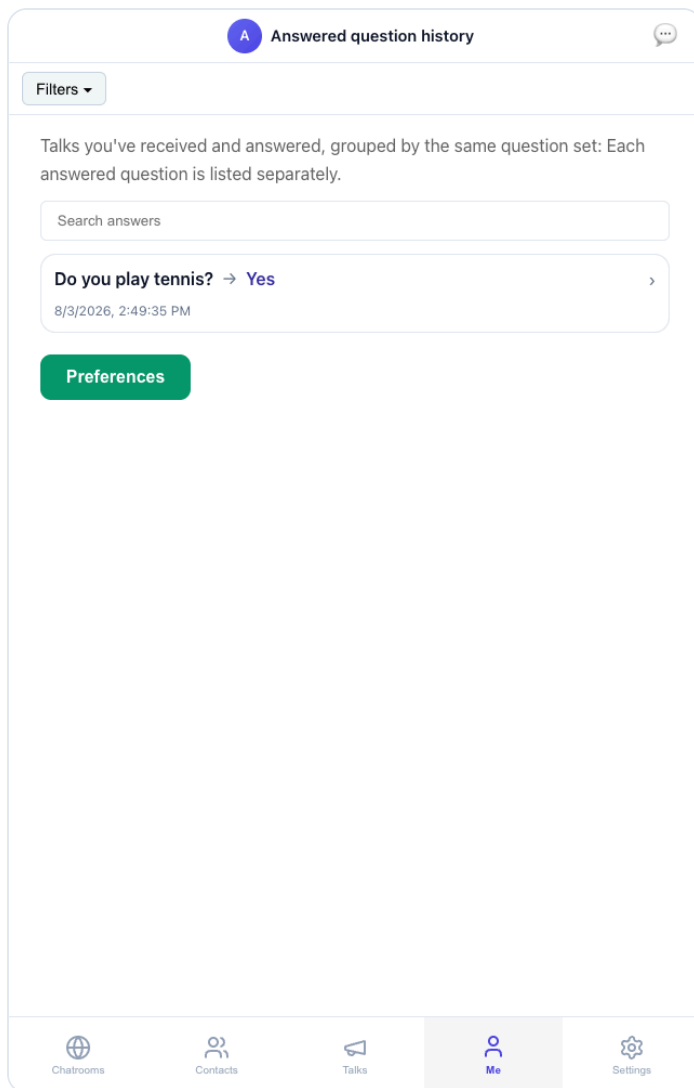

Person detail — opened by tapping the row (not the name): relationship & credit, talk history, and a DM composer, without jumping straight into the conversation.

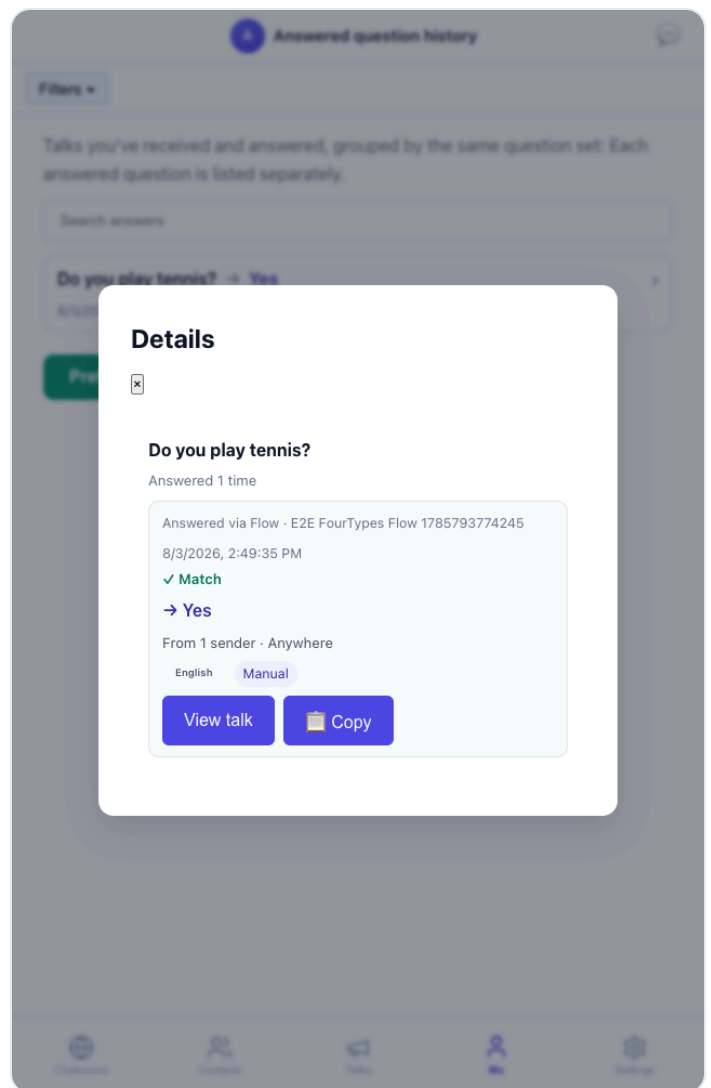

Merged in/out list — direction + type checkboxes, merged stats line, background tint/border-side distinguishes in vs. out.

Details popup — opened via long-press; full metadata (language, expiry, location, stats) that used to sit on the row.

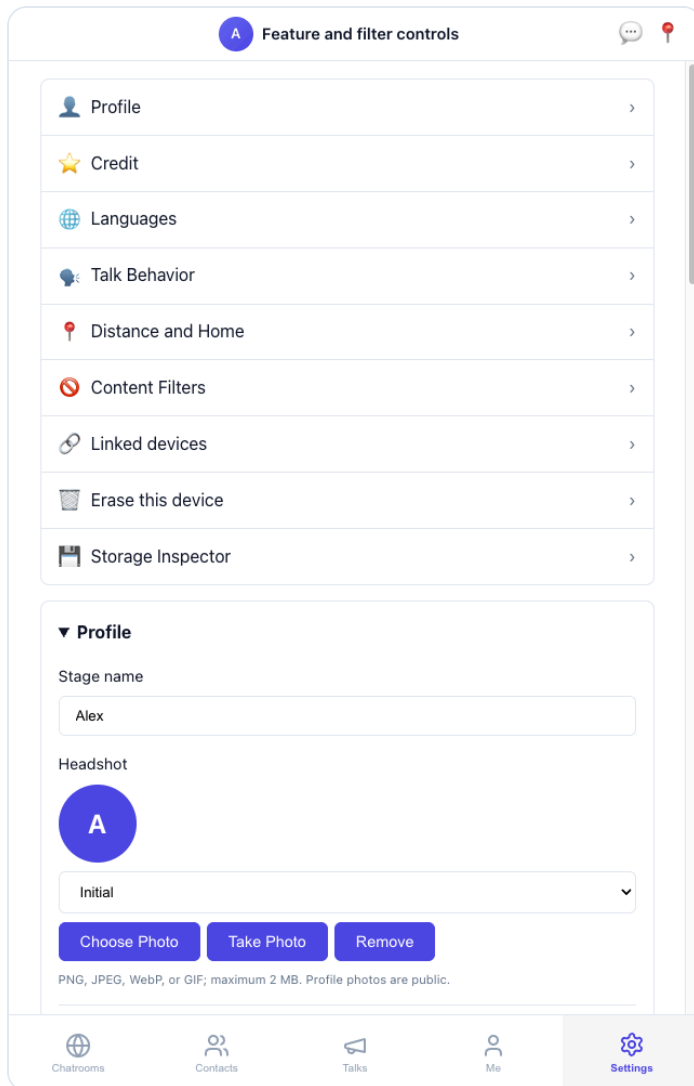

Answered questions list — one merged row per question (spec-defined content id), regardless of which talk asked it.

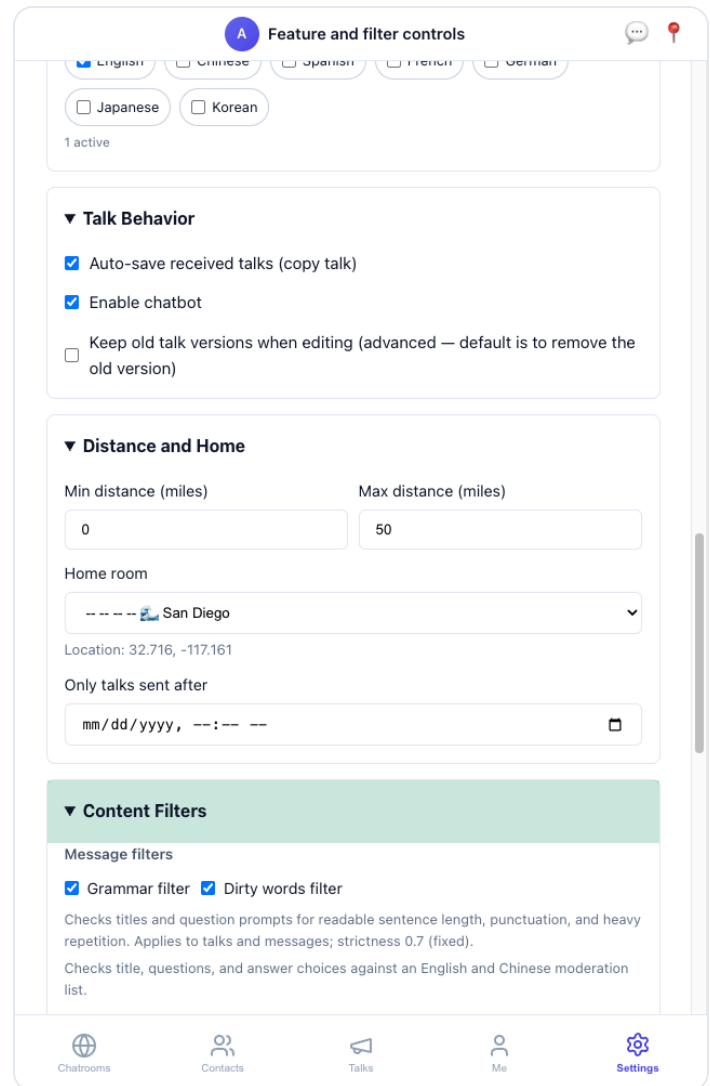

Details popup — per-variant breakdown: which talk it came from, outcome, language, mode, with "View talk" / "Copy" actions.

Settings

Jump menu — one flat list of all 9 sections at the top of the page.

After tapping "Content Filters" — smooth-scrolled to and briefly flashed; every section still renders open exactly as before.
