Erase confirmation (type-to-confirm)

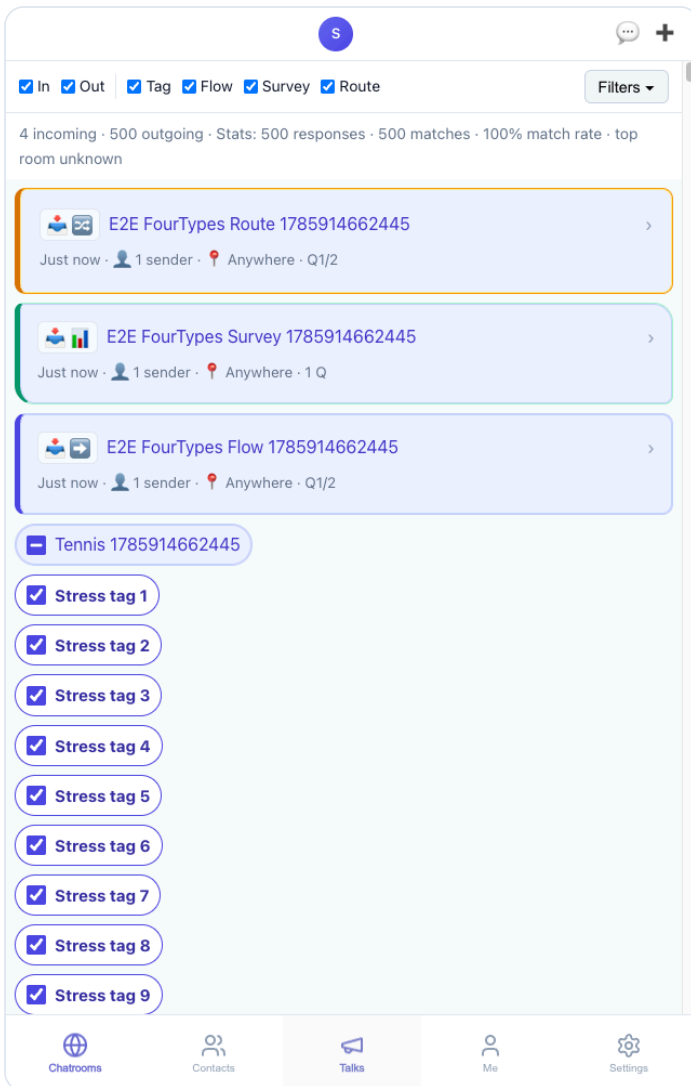

Room list — Global plus the regional hierarchy, default view on login.

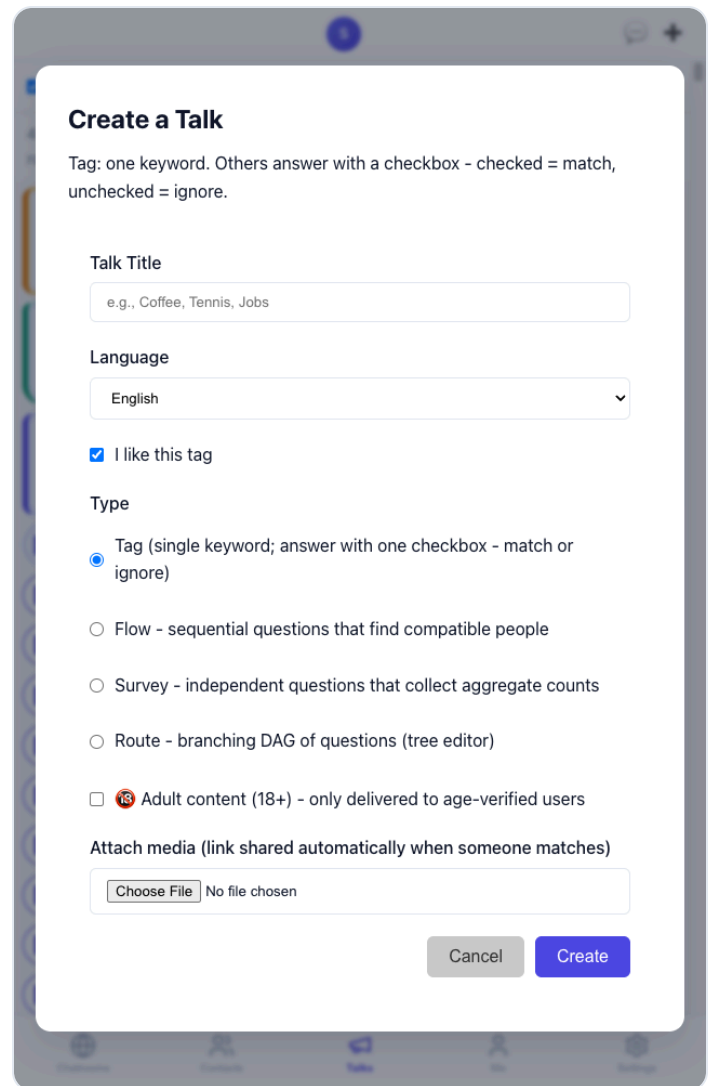

Region node expanded in place — children render inline, no separate screen.

Room detail — member list for Global, including the heavy user, TechSupport, and the tour sender.

Merged IN/OUT talks list — 500 outgoing talks (this user authored) plus incoming rows once delivered.

Talk editor — tag type question/branching UI.

Create a Talk

Flow: a linear chain of unique questions - the first answer decides and the rest are ignored.

Talk Title

Language

English

Type

☐ Tag (single keyword; answer with one checkbox - match or ignore)

☒ Flow - sequential questions that find compatible people

☐ Survey - independent questions that collect aggregate counts

☐ Route - branching DAG of questions (tree editor)

Questions (flow)

Flow: each question must be unique. The first answer is your match or next-question decision; extra answers are treated as ignore.

Question 1

Enter your question here (e.g., Do you like coffee?)

☐ Answer 1

 →

Ignore (filter out)

☐ Answer 2

 →

Ignore (filter out)

Talk editor — flow type question/branching UI.

Create a Talk

Survey: independent question and answer pairs. Counts per answer are tallied for statistics.

Talk Title

Language

English

Type

☐ Tag (single keyword; answer with one checkbox - match or ignore)

☐ Flow - sequential questions that find compatible people

☒ Survey - independent questions that collect aggregate counts

☐ Route - branching DAG of questions (tree editor)

Questions (independent)

Survey: questions are independent - no branching. Every answer has a counter used for aggregate statistics.

Question 1

Enter your question here (e.g., Do you like coffee?)

☐ Answer 1

 →

Ignore (filter out)

☐ Answer 2

 →

Ignore (filter out)

Talk editor — survey type question/branching UI.

Create a Talk

Route: a branching DAG. Each answer can lead to a follow-up question; the same question can appear in different branches with different context ids.

Talk Title

e.g., Coffee Meetup, Quick Survey

Language

English

Type

☐ Tag (single keyword; answer with one checkbox - match or ignore)
☐ Flow - sequential questions that find compatible people
☐ Survey - independent questions that collect aggregate counts
☒ Route - branching DAG of questions (tree editor)

Route (DAG editor)

Build a branching tree. Each answer can lead to a follow-up question. On any path from root to leaf, the same question cannot appear twice; it may appear in separate branches with separate context ids.

Q:	Question (end with ?)	+ Add Answer
Match	Match.	+ Child Q ✖
Ignore	Ignore.	+ Child Q ✖

Talk editor — route type question/branching UI.

Details

Send

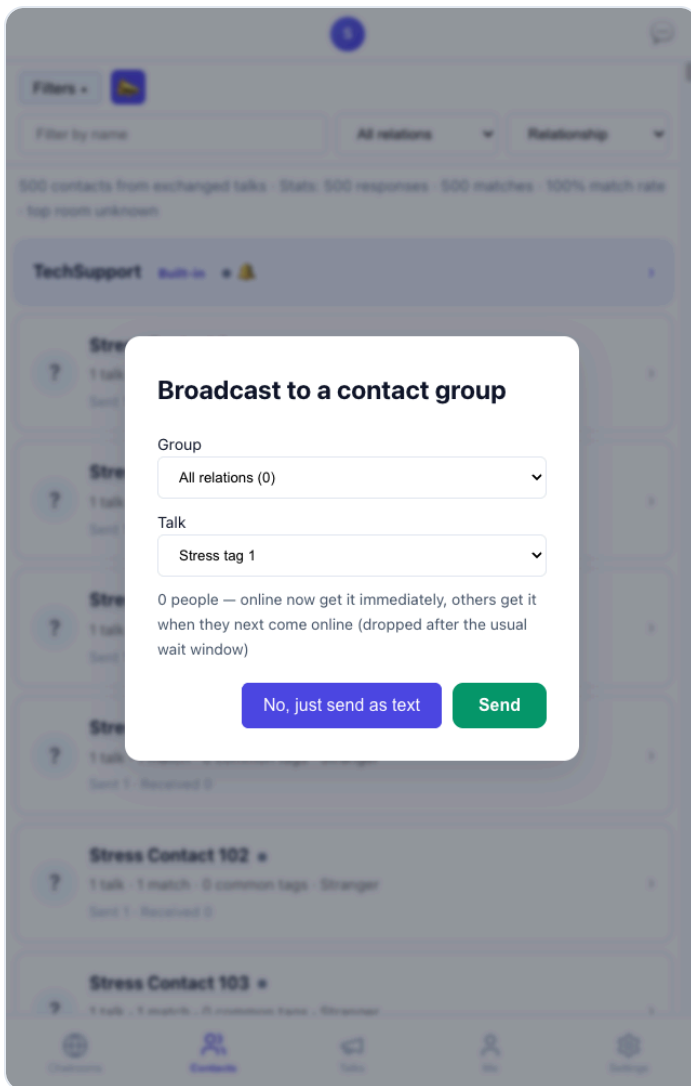

Tapping the underlined name opens the DM conversation directly.

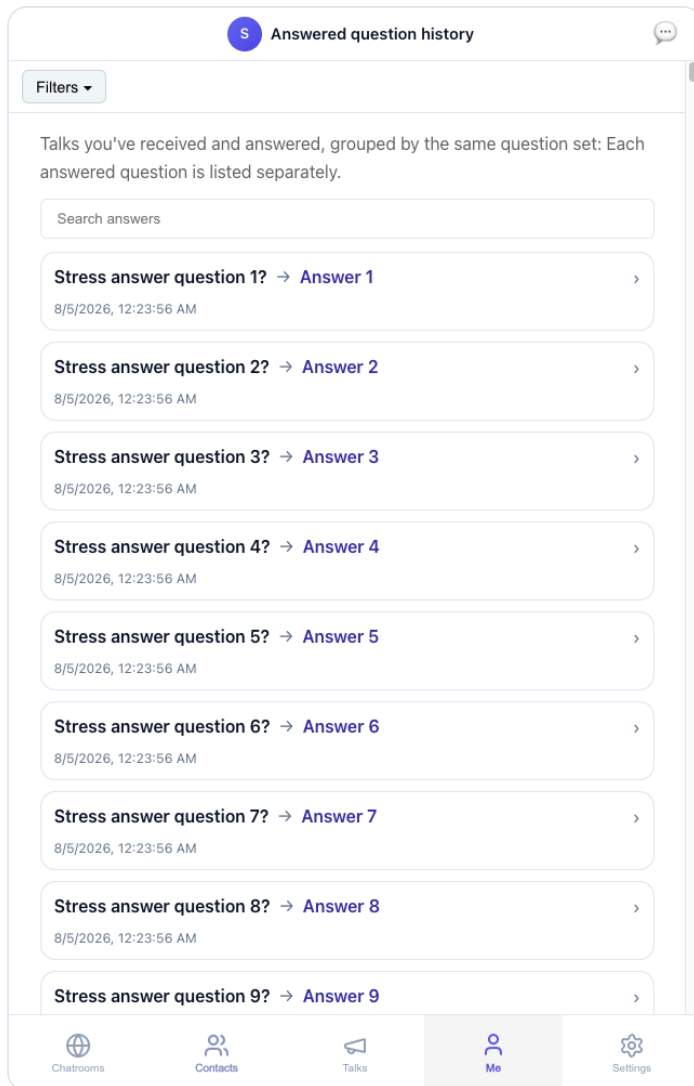

TechSupport's pinned contact row — same peer-detail layout, mute-aware.

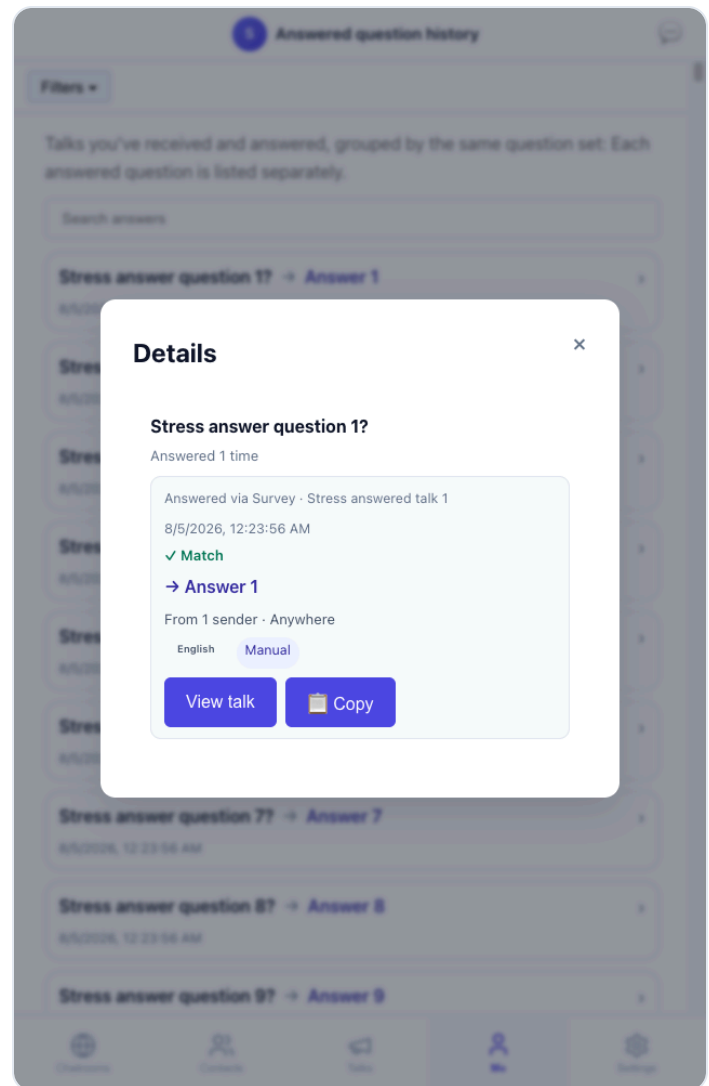

TechSupport's relationship dialog is mute-only — no Block button rendered at all.

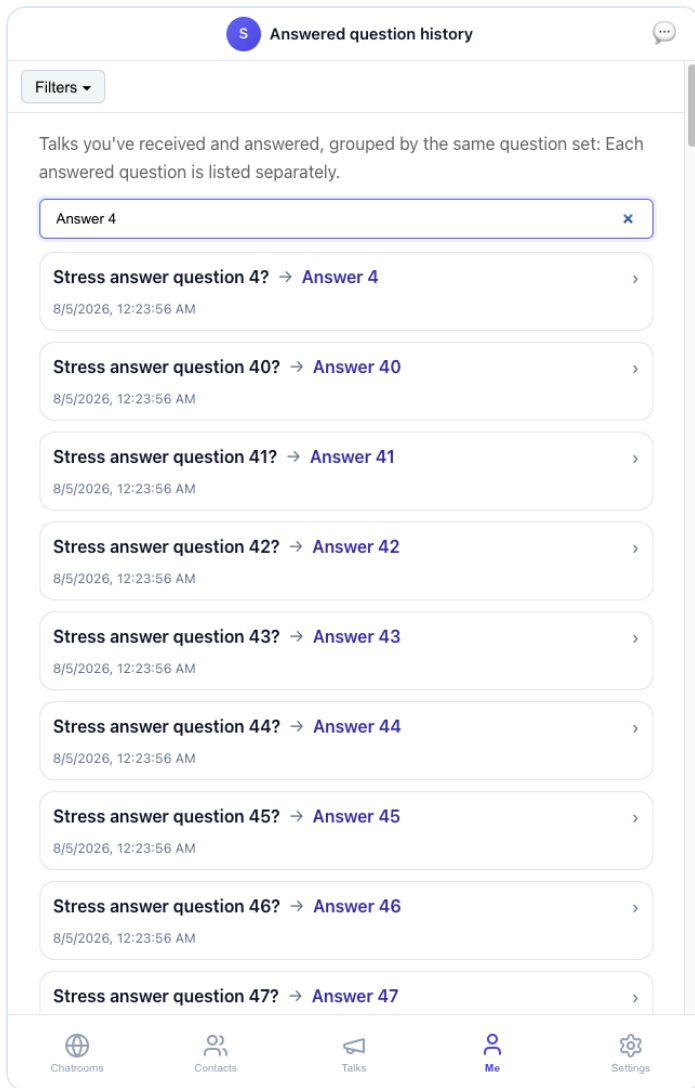

Broadcast-to-group modal — pick a relationship group and a talk to send.

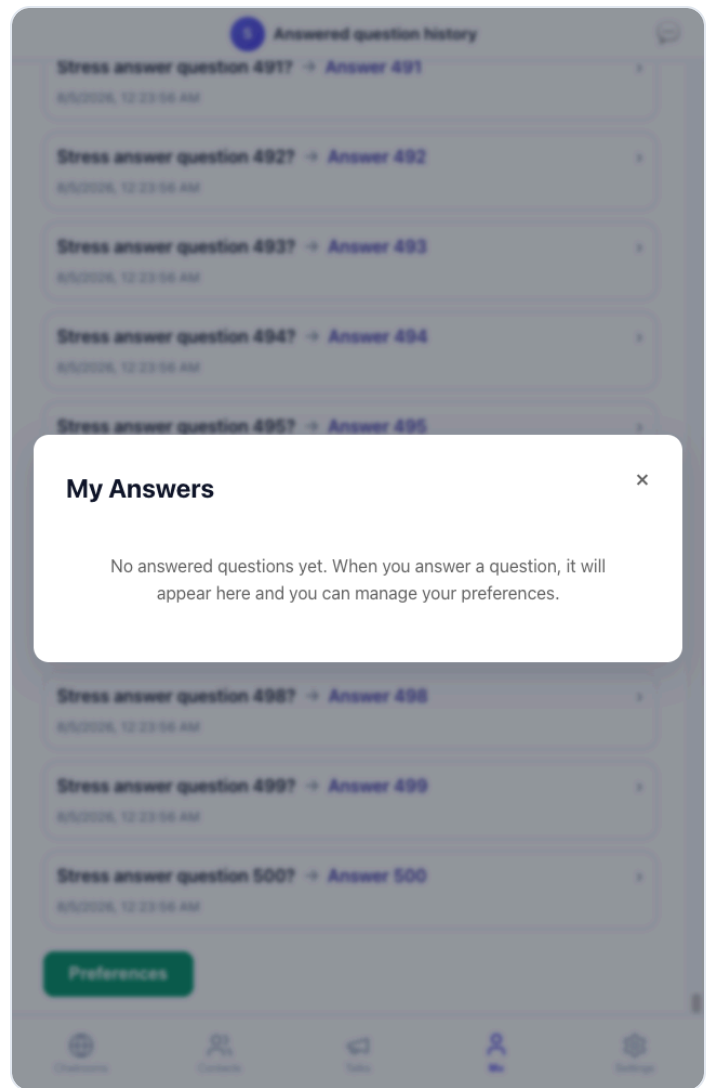

Answered questions merged by spec-defined question identity — one row per question regardless of which talk asked it.

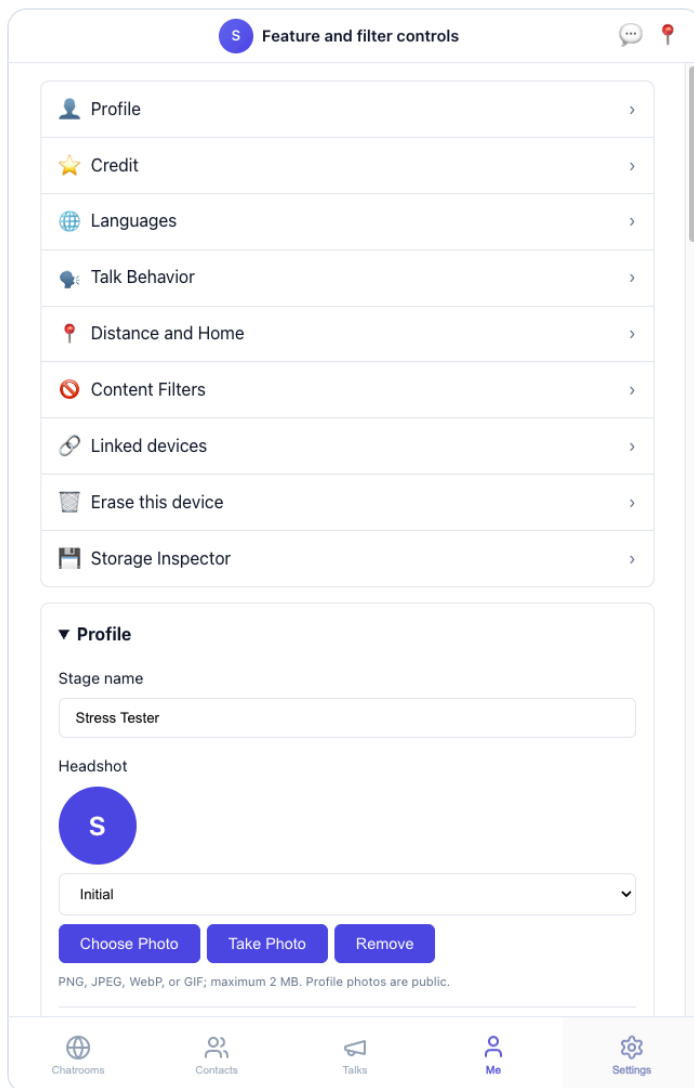

Answer details popup — per-variant breakdown: talk, outcome, language, mode.

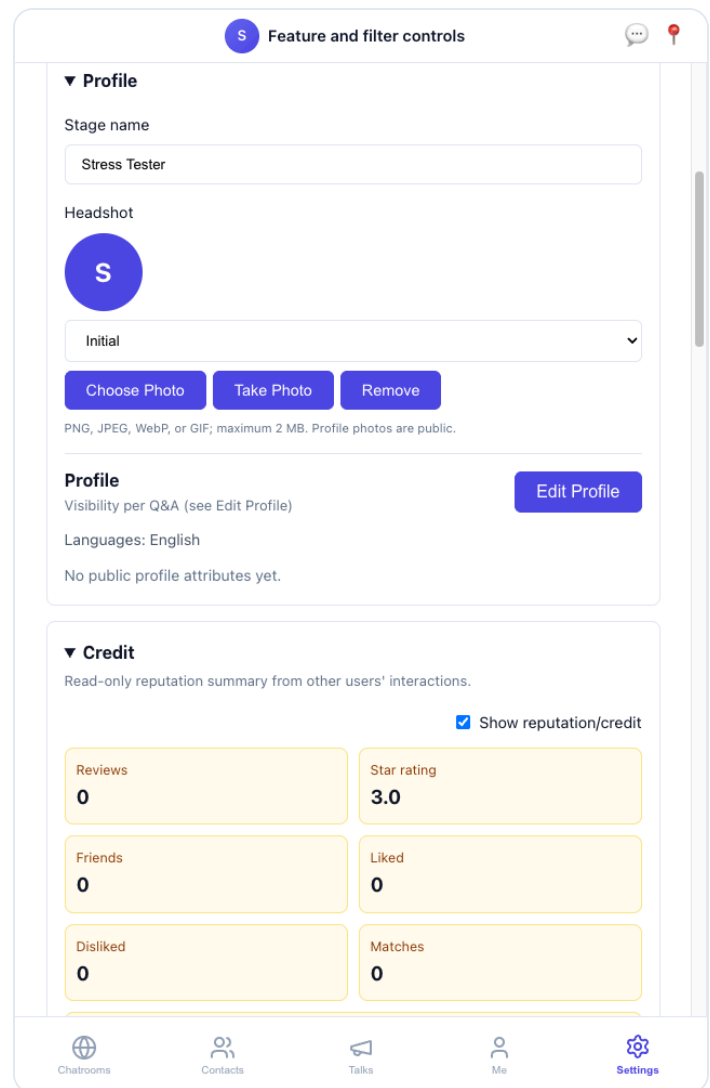

Answers filtered by search.

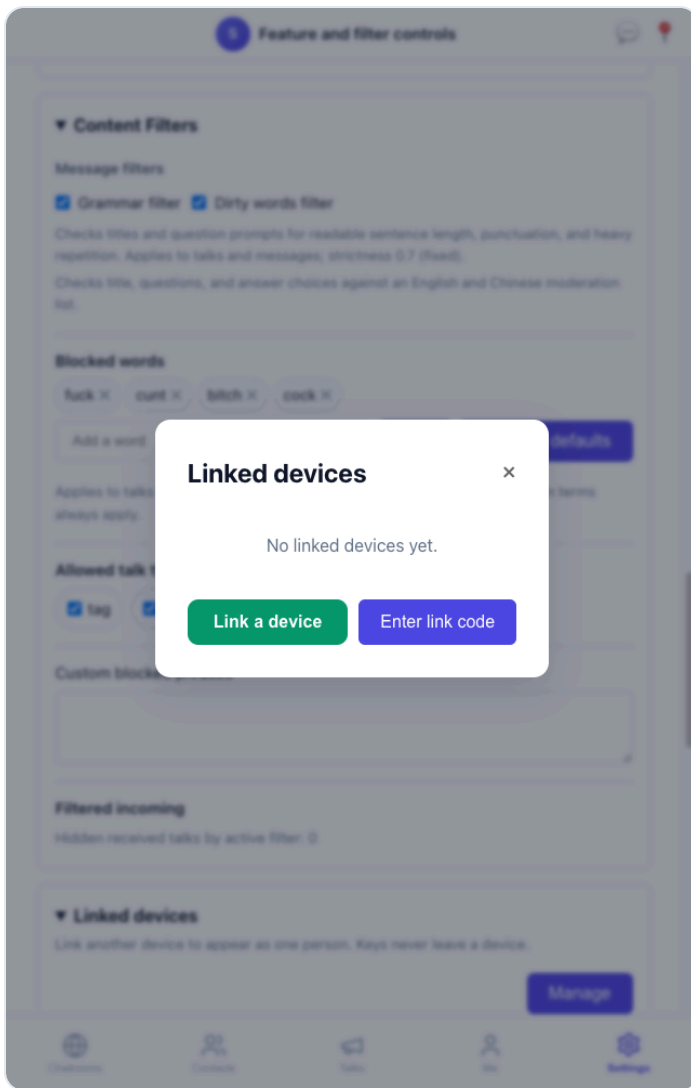

Preferences modal — auto-answer mode controls.

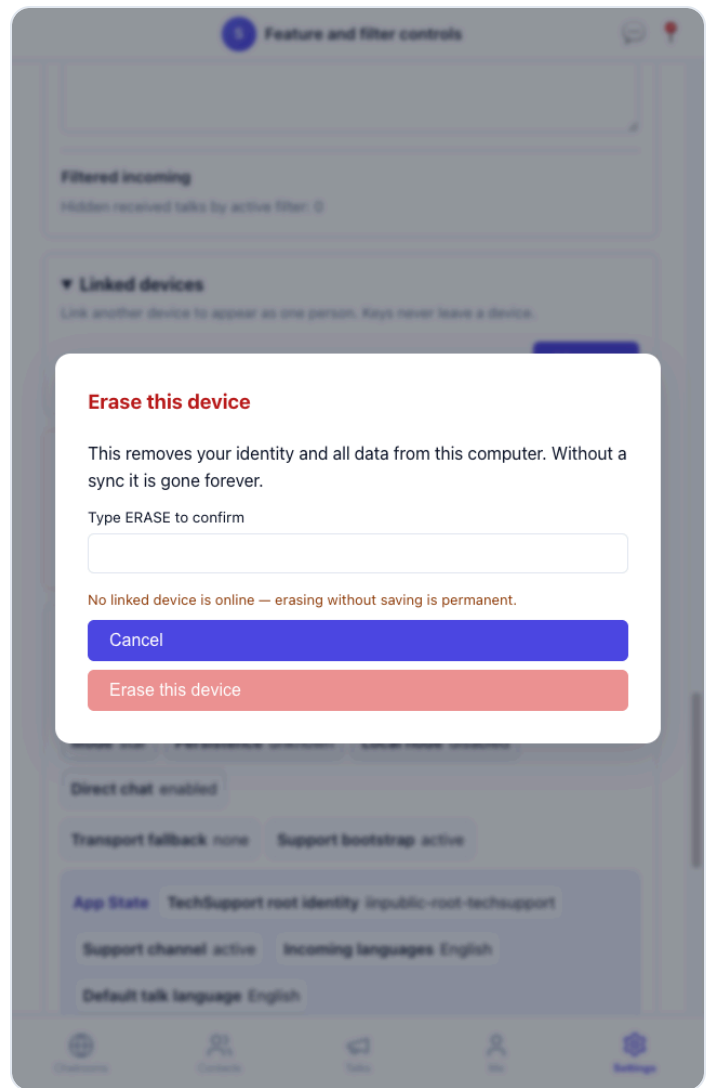

One flat jump menu over all settings sections — every section still renders open below it.

Jump menu scrolls to and flashes a section — Content Filters here.

Linked devices overlay.

Erase-device confirmation — type-to-confirm guard, cancelled here (not actually erased).
